

MECHLIFT 150 Bin Lifter

WHY THE MECHLIFT ML150 LIFTER?

Everyone knows the many advantages of using the European style 240 litre bins, but what equipment is needed to empty this bin?

For areas where there is still a high proportion of hand-loaded plastic bags, your vehicle needs to be equipped to efficiently handle both bags and bins with complete versatility.

The **ML150** has proven itself to be the most popular "low-level" lifter, which is also capable of handling the high demands of areas which have converted to the 240 litre bin system.

The **ML150**, with its patented rotary lift action, which is not only more efficient but also uses much less power from the vehicle's engine, can achieve a cycle time of 7 to 8 seconds with bins weighing up to 180kg.

► **COMPACT** - Bags are easily thrown over the top of the **ML150**, as it is practically level with the hopper's sill edge. The ground clearance under the lifter is much greater than on other comparable lifters, which result's in much less accidental damage.

► **EASILY REMOVABLE AND TRANSFERABLE** - The **ML150** is the only lifter, which can be removed or transferred in under two minutes without the use of any tools!

► **EFFICIENT** - A single rotary actuator drives each lifter, this provides a smooth bin emptying cycle. Stubborn refuse is normally ejected on the first attempt due to the tipping angle of 45°.

► **LOCAL PRODUCT** - The **ML150** is locally designed, manufactured and maintained for South Africa's unique conditions.
